The New U. S. Geological Report
 World's Oil Resources
 Washington, May 10.—The following is a comparative summary of the quantity of crude petroleum produced and marketed, imported, consumed, and held in storage in the United States during last March and last February, and in March, 1919, and in the corresponding month of last year. It has just been compiled by C. C. Osborn and E. Russell Lloyd of the geological survey of the department of the interior.

In the preparation of this report, the statements with regard to fields east of the Rocky mountains are based upon reports filed by about 150 pipeline, marketing and refining companies. Only such reports as being included as received crude oil by private pipelines or tank cars directly from the wells. Statistics relating to California and its imports and exports were compiled from secondary sources. This statement, however, indicates the general trend of conditions in the crude petroleum industry in this country.

The quantity of crude petroleum run from wells and producers' field storage tanks and delivered to pipeline, marketing companies, refineries and other consumers in the United States in March, 1919, amounted to approximately 30,412,000 barrels, an increase of 3,901,000 barrels, or about 13 per cent, compared with 26,511,000 barrels, or nearly 3 per cent, compared with March, 1918. The average daily rate in March, 1919, was 981,022 barrels, a quantity greater by 24,119 barrels, or a little more than 2 per cent, than the average daily rate in the preceding month, and by 25,162 barrels, or nearly 2 per cent, than the average daily rate in the corresponding month of last year. It is noteworthy that the general trend of production in March, 1919, was upward in all the oil fields except Louisiana, where there was a slight decline in average daily rate of production. Credit for the greatest increase is due to the Gulf Coast field, which added about 16 per cent to its daily average. The corresponding increase in California was about 6 per cent, and the Illinois field, which has been declining in production for several years, increased its daily output to the extent of nearly 11 per cent compared with February, 1919. Declining production in some of the Oklahoma points was a little more than offset by the flush production in the northern Texas and Louisiana areas of the Mid-Continent field.

It is estimated that 28,215,000 barrels of domestic crude petroleum was delivered in March, 1919, to:

benefited by the acquisition of a great many new and considerable amounts in the very complex problem of buying satisfactory paints and varnishes.

It has been the earnest endeavor of every effort and member of the Purchasing Agents' association of Tulsa to bring the advantages of membership in this association to the favorable attention of the purchasing agents, officers and executives of the various oil and refining companies operating in this part of the mid-continent field. The man who knows more about the material he buys, how and where it is used, and more than that, what should be used, and puts his knowledge into practice, is the man who will be elevated to the higher and better paying positions in any line of business. It is evident that right principles and methods underlie the conduct of that business, and it is believed that a profitable and practical step in the improvement of their own methods in the material and purchasing ends can be accomplished by the numerous oil and refining companies in Tulsa, through their executives and purchasing agents taking an active interest in the affairs of the Purchasing Agents' association of Tulsa to develop men with knowledge and pride in their work with enthusiasm in their blood and loyalty in their hearts.

At Garber
 The Lyhene No. 1 in the center of the south line of 1-22-4W found some gas in the sand where oil was expected at a depth of 2,335 feet. The well will drill to the next sand.

The Lyhene No. 2 in the northwest corner of the section, offsetting the Plaza Seaman, is drilling at 1,160 feet.

The No. 2 Blime located in the southeast corner of the northeast of 12-22-4W, flowed 40 barrels in 50 minutes after which the drill was lowered and a few feet drilled when a flow of oil water was struck that shut off the oil and filled the hole several hundred feet. It will probably make a good well when the water is shut off.

The Medlen well in the southwest of 22-23-4W is running the 16-inch casing. They recently received a new inch steel cable and expect to make better progress from now on.

At Stone Bluff
 Minot and Minot #1 others are setting the 16-inch casing at 400 feet.

Supply Houses, Purchasing Agents, Jobbers and Refineries, ATTENTION!
 We make the best brooms that it is possible to make from Oklahoma broom corn, which is admittedly the best broom corn grown in the world.

Warehouse Brooms
 Made by us in a class by themselves and bear the label, "Oklahoma Chief." They weigh from thirty to forty-four pounds to the dozen. Either all corn, for sweeping refinery stills, etc., or bamboo centers for warehouse and other heavy work.

Parlor Brooms
 In the high grades you have always wanted, all bearing "Butterfly" labels.

Whisk Brooms, Toy Brooms
 Retail trade supplied by jobbers.
